

IN THE CLAIMS:

Please amend the claims as follows:

1. **(Currently amended)** An air conditioning system for a vehicle comprising:

- a compressor for compressing a refrigerant,
- a condenser for condensing the refrigerant,
- an evaporator for evaporating the refrigerant,
- a discharge fluid line interconnecting the compressor and said condenser,
- a liquid fluid line interconnecting said condenser and said evaporator,
- a suction fluid line interconnecting said evaporator and said compressor,
- an accumulator/dehydrator (A/D) disposed in said suction fluid line for

accumulating refrigerant, and

a heat transfer jacket surrounding said A/D and including a heat transfer media independent of the refrigerant in the system for exchanging heat with said A/D and the refrigerant ~~[[therein]]~~ in the system .

2. **(Currently amended)** A system as set forth in claim 1 wherein said heat transfer jacket defines a space surrounding said A/D and ~~[[a]]~~ said heat transfer media is disposed in said space for cooling by extracting heat from the refrigerant in said A/D.

3. **(Original)** A system as set forth in claim 2 wherein said space is defined by an inner wall of said A/D and outer wall spaced therefrom.

4. **(Original)** A system as set forth in claim 2 wherein said jacket is defined by a double walled sleeve surrounding said A/D and defining said space between said walls thereof.

5. **(Currently amended)** A system as set forth in claim 1 wherein said heat transfer ~~[[jacket]]~~ media comprises a thermoelectric device.

6. **(Currently amended)** A method of operating an air conditioning system of the type including a compressor for compressing a refrigerant, a condenser for condensing the refrigerant, an evaporator for evaporating the refrigerant, a discharge fluid line interconnecting the compressor and the condenser, a liquid fluid line interconnecting the condenser and the evaporator, a suction fluid line interconnecting the evaporator and the compressor, and an accumulator/dehydrator A/D disposed in the suction fluid line for accumulating refrigerant, said method comprising the steps of surrounding the A/D with a heat transfer jacket and exchanging heat with the A/D and the refrigerant therein independently of the refrigerant in the system.

7. **(Original)** A method as set forth in claim 6 further defined as surrounding the A/D with a space and disposing a heat transfer media in the space for cooling by extracting heat from the refrigerant in the A/D.

8. **(Original)** A method as set forth in claim 7 further defined as disposing an outer wall about an inner wall of the A/D to provide the space.

9. **(Original)** A method as set forth in claim 7 further defined as disposing a double walled sleeve about the A/D to define the space between the walls thereof.

10. **(Original)** A method as set forth in claim 6 further defined as disposing a thermoelectric device about the A/D to define the jacket.
